# FUNCIONES APP

## 1. Vision & Purpose of the Appcont

The MesoPatch app

is the central rol hub of the Mesoestetic ecosystem. Its purpose is to convert patch data into clear decisions, guide personalized routines in real time, ensure correct treatment application, make results visible, and automate skincare. The app transforms Mesoestetic from a product-based brand into a provider of measurable, data-driven results.

## 2. General App Architecture

- Home Dashboard
- Skin Scan (MesoPatch) ***(depende de como funcione el chip, si ya está conectado no hay que escanearlo)***
- Intelligent Routine & Video Tutorials
- Progress & Skin History
- Smart Product Management (Inventory & Replenishment)
- Profile, Education & Professional Chatbot

### 2.1. Home Dashboard – Daily Control Center

- Real-time skin status overview
  - Visual indicators: hydration, barrier, irritation, sebum, stress
  - Traffic-light alerts (green / amber / red) with cause and action
  - Daily AM/PM routine summary
  - Quick actions: Scan, Start Routine, Chatbot

### 2.2. Skin Scan – MesoPatch Core

- Patch detection and activation
- Real-time data reading and storage
- Three result levels: basic, intermediate, advanced
- Color-coded facial mapping (red/yellow/green zones)
- Trend visualization: 24h / 7 days / 30 days

- Calibration, signal quality and connection status

### 2.3. Intelligent Routine System

- Dynamic AM and PM routines
- Routine adaptation based on patch readings
- Sensitivity detection and recovery mode
- Correct order, quantity and timing of products
- Daily automatic adjustments

### 2.4. Video Tutorials & Guided Application

- Personalized short video per routine step
- Correct application technique
- Exact product quantity guidance
- Specific guidance based on active treatments

### 2.5. Progress & Skin History

- Skin evolution charts
- Weekly and monthly comparisons
- Before / After photos
- Automated insights (e.g. +18% hydration in 30 days)
- Milestones and adherence indicators

### 2.6. Education & Skin Academy

- Micro-learning content
- Explanation of skin metrics and actives
- Best practices and safety tips
- Professionally validated educational material

## 9. Chatbot & Professional Support

- AI dermatology assistant for daily questions
- Routine and product guidance
- Alert interpretation and prevention advice
- Human escalation for adverse reactions
- Specialist or clinic referral when needed

**10. Smart Product Management (Inventory)**

- Product registration and barcode scanning
- Stock and remaining quantity tracking
- Expiry date and PAO monitoring
- Compatibility checks with current skin condition
- Consumption prediction and reminders
- Automatic reorder with user confirmation

**11. User Profile & Skin Identity**

- Basic personal data and lifestyle indicators
- Skin type and sensitivity profile
- Skin goals and priorities
- Treatment and reaction history
- Allergies and ingredients to avoid

**12. Privacy, Consent & Device Management**

- Consent and data-sharing controls
- Patch and chip pairing management
- Battery, firmware and connection status
- Data export and account deletion options

**13. Clinic & Professional Integration (B2B2C)**

- Clinic linking via code or QR
- Shared skin reports with consent
- Professional recommendations and notes
- Treatment follow-up tracking
- Appointment and protocol reminders

**14. Professional Mode – Clinics**

- Professional login and verified clinic profile
- Patient dashboard and monitoring
- Objective treatment follow-up
- Digital prescription and protocol adjustment
- Clinical reporting and aggregated insights
- Professional training and content updates

**15. Data, Technology & Intelligence Layer**

- Skin biometric data collection
- User behavioral and routine data
- Contextual data (climate, location)
- Cloud-based processing with protected clinical environments
- Time-series, relational and NoSQL databases
- AI models for insights, personalization and prediction

**16. Strategic Value of the App**

- Transforms physical products into continuous digital services
- Drives engagement, adherence and recurrence
- Strengthens brand–clinic–patient ecosystem
- Creates a defensible, data-driven competitive advantage

## CONCLUSIONES DE LA APP:

**The app is not a companion — it is the product**

The MesoPatch app is not an accessory to Mesoestetic products, but the core value generator.

It converts a physical patch into a continuous digital medical-cosmetic service, where results are monitored, guided and optimized in real time.

Conclusion: Mesoestetic evolves from selling skincare products to delivering measurable treatment outcomes.

**Data turns skincare into a controllable system**

By integrating patch readings, user behavior, routines, and contextual data, the app transforms skincare from a subjective experience into a structured, data-driven system.

- Skin status becomes visible
- Decisions are automated
- Adjustments are continuous

Conclusion: The app reduces uncertainty and increases treatment precision, safety and consistency.

**Personalization becomes dynamic, not static**

Unlike traditional skincare personalization (based on a one-time questionnaire), the MesoPatch app enables dynamic personalization:

- Daily routine recalibration
- Sensitivity and recovery modes
- Adaptive product quantity and timing

Conclusion: Personalization shifts from “who you are” to “how your skin behaves today”.

**Adherence is engineered, not requested**

Through visual alerts, guided routines, short videos, progress feedback and automated reminders, the app removes friction and cognitive effort from the user.

- Users don’t need to remember
- Users don’t need to interpret
- Users don’t need to guess

Conclusion: Treatment adherence is systematically increased, directly improving clinical outcomes.

**Education builds trust and long-term engagement**

The Skin Academy and guided explanations transform users into informed participants rather than passive consumers.

- Metrics are explained
- Actives are contextualized
- Safety is emphasized

Conclusion: Education becomes a trust-building and retention tool, not just content.

**AI support scales dermatological expertise**

The AI chatbot acts as a first-line dermatology assistant, resolving daily doubts while ensuring safety through escalation protocols.

Conclusion: The app scales professional guidance without replacing human specialists, optimizing cost and accessibility.

**Smart inventory closes the loop between treatment and commerce**

By tracking usage, compatibility and consumption, the app connects treatment logic with product lifecycle management.

- No overuse
- No expired products
- No incompatible routines

Conclusion: Commerce becomes a consequence of treatment needs, not aggressive selling.

**Clinics are integrated into a single ecosystem**

The B2B2C architecture allows clinics to:

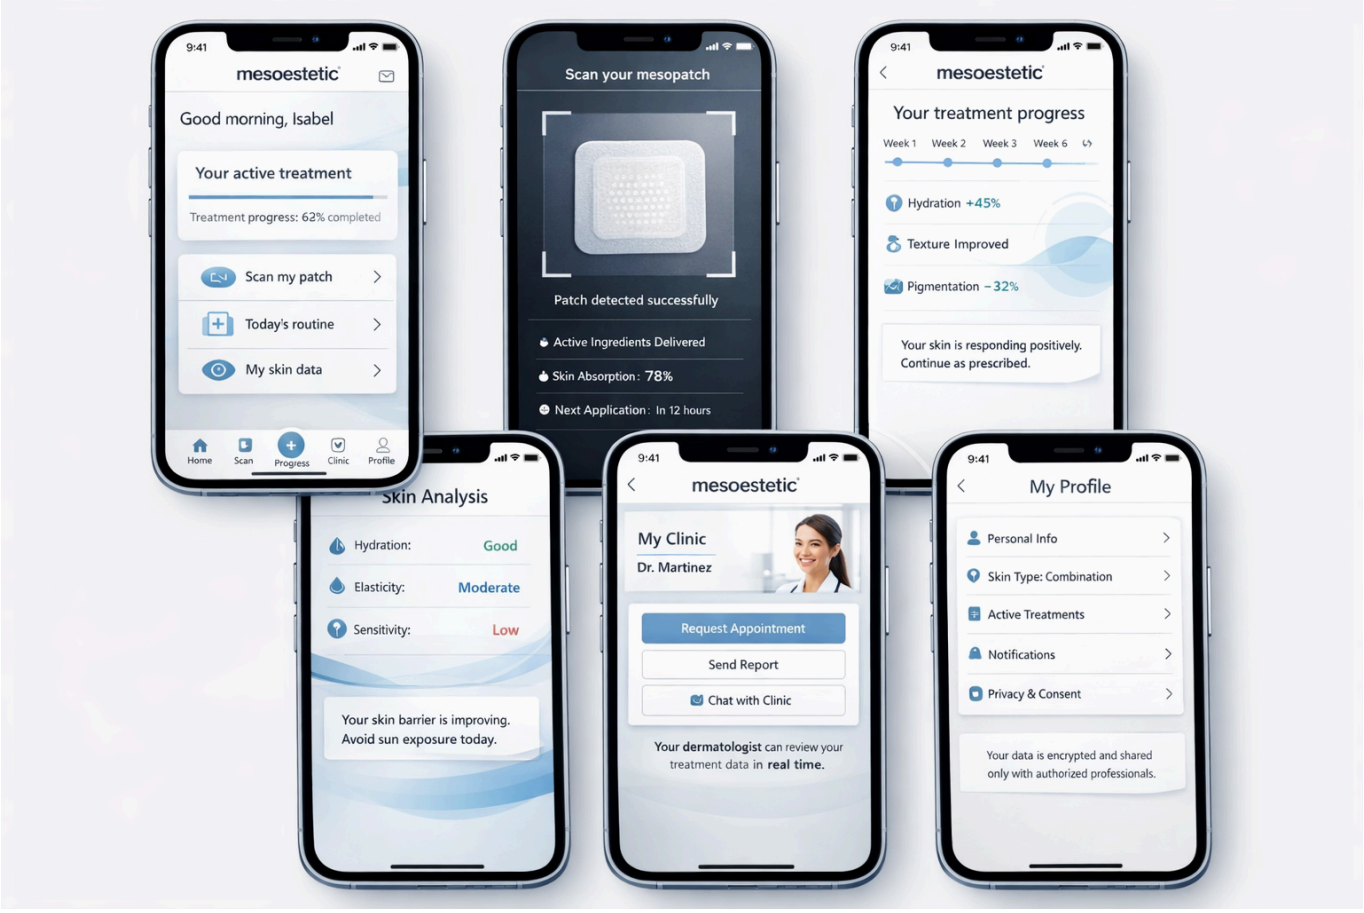
- Monitor patients objectively
- Adjust protocols digitally
- Track adherence and outcomes

Conclusion: The app strengthens clinic loyalty and positions Mesoestetic as a clinical technology partner, not just a supplier.

**The app creates a defensible competitive moat**

The combination of:

- Proprietary patch data
- Longitudinal skin history
- AI personalization models
- Clinic integration

**Creates a system that is extremely difficult to replicate.**


Conclusion: Competitive advantage shifts from formulations alone to an integrated data + device + service ecosystem.
